PROFESSIONAL SUMMARY

Full Stack Engineer with 4+ years of experience building scalable enterprise applications, SaaS products and backend systems using Node.js and React.js. Experienced in secure APIs, performance optimization, multi-tenant platforms and delivering production-grade software from architecture to deployment.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL

Backend: Node.js, Express.js, NestJS, REST APIs, WebSockets

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS

Databases: PostgreSQL, MongoDB, MySQL

Tools: Prisma, Knex.js, Docker, Git, CI/CD

Cloud: AWS, DigitalOcean, Cloudflare

Engineering: System Design, Multi-Tenant Architecture, API Security

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Feb 2025 – Present

Coreline IT Solutions — Pune, India

- Architected backend services supporting enterprise SaaS applications and complex business workflows.
- Developed modular REST APIs supporting scalable and high-volume application operations.
- Built admin dashboards using React.js, Next.js and Tailwind CSS for workflow automation.
- Improved API performance by 40% through query optimization and database indexing.
- Led engineering team of 6 developers and contributed to technical design decisions.
- Implemented JWT, RBAC and secure authentication systems for controlled user access.
- Built CI/CD pipelines reducing deployment time by 60% and improving release reliability.
- Developed multi-tenant backend modules supporting client data isolation and access controls.
- Integrated third-party APIs and enterprise service integrations across multiple products.
- Resolved production issues and performed performance tuning in live environments.

Full Stack Developer

Feb 2023 – Jan 2025

ARA Global — Pune, India

- Developed enterprise ERP platform supporting HR, payroll and reporting workflows.
- Built React.js dashboards for operational management and internal business users.
- Developed scalable backend APIs using Node.js supporting high-volume business workflows.
- Refactored legacy backend code reducing system latency by 40%.
- Built real-time modules using WebSockets supporting event-driven application updates.
- Designed PostgreSQL and MongoDB schemas supporting scalable data management.
- Implemented structured logging and error handling improving system stability.
- Developed reusable backend modules improving feature delivery speed across projects.

Freelance Full Stack Developer (Contract Remote)

Feb 2022 – Jan 2023

- Delivered custom web applications and backend APIs for startup and small business clients.
- Built React.js frontends and Node.js backend services for client-facing solutions.
- Delivered admin dashboards, business websites and internal management tools.
- Designed relational database schemas and implemented backend business logic.
- Integrated authentication, payment workflows and third-party service APIs.
- Managed end-to-end project delivery including development, deployment and client handoff.

KEY PROJECTS

StudyPulse — Online Learning SaaS Platform

- Built scalable online learning platform supporting exams, academic workflows and student performance management.

- Developed exam scheduling, question management and automated result generation modules.
- Implemented secure role-based access controls for students, faculty and administrators.
- Integrated subscription billing and payment workflows supporting paid platform access.
- Built analytics dashboards for institutions to monitor engagement and academic performance.
- Designed backend APIs supporting faculty operations, student workflows and reporting.

Indian Design Editing Platform

- Developed customizable design editing platform for branded templates and digital asset generation.
- Built real-time editing workflows supporting dynamic content and template modifications.
- Developed template rendering and export modules supporting downloadable design assets.
- Integrated Cloudflare asset storage and CDN delivery improving media loading performance.
- Built dynamic layer management features for reusable and editable template components.
- Designed backend services supporting template purchases, asset generation and downloads.

POST EAT — Food Delivery Platform

- Developed full-stack food delivery application supporting customers, restaurants and delivery partners.
- Built order tracking using WebSockets for real-time status and order updates.
- Designed order lifecycle services handling creation, processing and delivery completion.
- Implemented menu and restaurant modules supporting catalog and order management.
- Built payment and checkout workflows supporting order confirmation and transactions.
- Designed scalable backend services handling concurrent customer orders reliably.

KT Guru — Knowledge Transfer SaaS Platform

- Developed SaaS platform supporting remote knowledge transfer sessions for consultants and clients.
- Built live collaboration features including shared communication and engagement workflows.
- Designed secure session access controls and permission-based participant management.
- Developed backend services supporting concurrent multi-user session activity.
- Improved live-session reliability through backend optimizations and performance tuning.

Enterprise HRMS and Payroll System

- Developed employee management and payroll modules supporting HR operational workflows.
- Built attendance tracking and leave workflows supporting policy-based approvals.
- Developed approval workflows and reporting dashboards for HR administration.
- Implemented role-based access permissions supporting controlled user access.
- Designed APIs supporting employee, payroll and reporting business processes.

Multi-Tenant SaaS Admin Platform

- Designed multi-tenant SaaS architecture supporting isolated environments for multiple clients.
- Developed tenant-aware APIs and access controls supporting client-specific operations.
- Built client workspace isolation modules improving security and data separation.
- Implemented subscription and usage management workflows for tenant administration.
- Designed scalable data models supporting tenant isolation and application growth.

Workflow Automation Platform

- Built enterprise workflow automation platform supporting approvals, routing and task execution.
- Developed configurable business process flows supporting rule-driven operations.
- Implemented rule-based approval chains for multi-stage workflow processing.
- Developed APIs supporting process orchestration and workflow integration services.
- Improved operational efficiency through automation of repetitive business processes.
- Designed document and task lifecycle modules supporting end-to-end workflow management.

EDUCATION

Bachelor of Engineering — Computer Science
 Dr. Babasaheb Ambedkar Marathwada University
 Aurangabad, India
 Graduated: 2023
